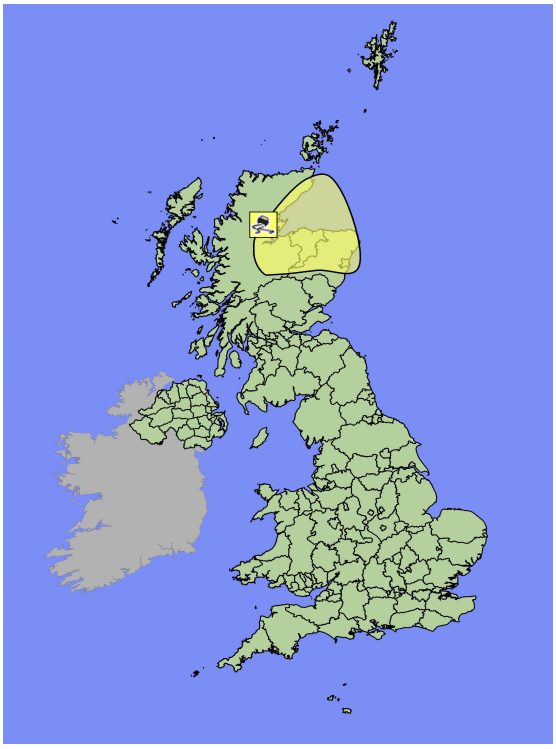
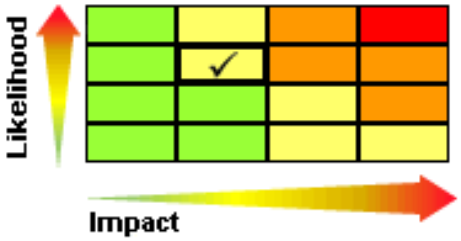
National Severe Weather Warning Service





Chief Forecasters Assessment
A frontal system moving in from the Atlantic is introducing milder air across Scotland accompanied by a mix of rain, sleet and perhaps some wet snow. The ground will remain frozen for a while following the recent cold spell and so ice is expected to form on untreated surfaces giving locally difficult driving conditions. Surfaces should gradually rise above freezing this morning.

The Met Office have issued a **Yellow Warning** of **Ice**

Valid from **05:00 on Sat, 04th Feb 2012** until **10:00 on Sat, 04th Feb 2012**

A mix of rain and sleet is expected to fall onto frozen ground. The public are advised that this will lead to icy stretches developing on some untreated surfaces.
